Bodyweight FUN-damentals

Lose Fat & Gain Muscle While You Build Vitality, Energy & Mobility

CST Bodyweight Exercise – The All NATURAL Way

The frantic pace of modern life means finding time to exercise is always an issue. How many times have you fought traffic to get to a crowded gym, only to loaf around waiting for equipment to free up? Many of our clients were in just such a situation when they sought us out. Now they train entirely at home, or over lunch hour at the office. This cuts hours from a demanding schedule, which allows more time for family and personal interests.

Training at home is the perfect solution for the time-compressed. But why aren't more people doing it? Most set out with the idea of assembling a nice little home gym, but they're quickly discouraged due to bulky, expensive equipment. And so they become slaves to the gym because they think they need it.

It doesn't have to be like that. Our goal with this ebook is to introduce you to a better way. If you stick with us to the last page, we will give you:

- **An equipment-free way to train in your own home - or anywhere!**
- **Fat loss, newfound strength, and greater flexibility**
- **A radical new approach to getting the results you want while balancing your body and building your vitality**
- **More energy from your workouts, rather than less**
- **The most fun you've ever had "working out"**

Before we get to the exercises, we want you to know where we're coming from, and what's so special about this program.

We Discovered A Coach Who Showed Us The Secret

We've never been ones to accept the status quo. Our coaching experience taught us that the world's most successful people demand innovative solutions. As is often the case, our “**big**

secret” is elegant in its simplicity: you've been carrying around everything you ever needed to get in shape, every day of your life. No, it isn't your wallet. Your bodyweight and a little specialized knowledge are enough to ensure incredible results and a lifetime of peak fitness.

Bodyweight training can be as tough or as gentle as you want it to be. If that's the case, then why aren't more people doing it? The greatest problem with conventional bodyweight exercise programs is lack of variation—yep, it's dull. You can only do so many push-ups, sit-ups and jumping jacks before boredom drives you away. We understand this. That's where our coach, Scott Sonnon, came in. Using the methods he developed through decades of research into physical cultures around the world, we teamed up to fill our [Bodyweight](#)

[Exercise Revolution \(BER\) ebook](#), a Circular Strength Training® flagship product, with the most innovative exercises you've ever imagined. Such groundbreaking work earned Ryan a personal invitation to Scott Sonnon's elite Faculty Coaching Staff and nomination into the International Martial Arts Hall of Fame, and earned Adam the coveted rank of RMAX Head Coach. Now you, too, can join us in the Bodyweight Exercise Revolution.

Universal Acclaim Is One Thing—Getting You To Try It Is Something Else

Everyone who tries BER raves about it. But some have been shy to dive into this new world of innovative exercise which, from the outside, can appear a little intimidating. We've created this special Bodyweight FUN-damentals workout to prove to you just how accessible it is. We want you to join the world of [Circular Strength Training](#)® bodyweight exercise, and we're willing to take you by the hand to make sure you give it a try.

The Program

The FUN-damental Difference

Can Exercise Change Your Life?

The answer is a resounding yes! Adding intelligently designed exercise to an overall lifestyle of health and vitality can transform anyone's life. And we have concrete proof: CST's ground-

breaking [FlowFit®](#) program, another bodyweight-only workout, has transformed thousands of lives around the world.

Because we're applying the same principles as the critically acclaimed FlowFit® program, the BER FUN-damentals workout guarantees the same benefits. Expect to see simultaneous fat

“ Expect to see simultaneous fat loss and muscle gain as you build greater health and vitality.”

loss and muscle gain as you build greater health and vitality. You can't turn back the clock on aging, but if you apply these principles it'll feel like you have.

What's Different About the BER FUN-damentals Workout?

Throughout much of our evolutionary past, movement meant life. Hunting, gathering and defending oneself and the tribe were paramount to our survival as a species. Our ancestors were constantly leaping, surging, twisting, ducking and rolling their way through life.

Our modern world has chained us to desks and strapped us into cars. And when we get to the gym, we're treated to mere two-dimensional machine exercises. If we're lucky, we might be exposed to more three-dimensional training methods. But the truth is, humans were meant to move with infinite variety: through 6 Degrees of Freedom.

6DOF Theory

Beyond Flat World Fitness: Training in 6-Degrees of Freedom

Six Degrees of Freedom

The fitness industry is currently recovering from the isolationist paradigms of the bodybuilding craze and moving towards a 3-dimensional approach to exercise. But this isn't enough. We don't move robotically through one plane at a time. Human movement is a complex weave through different planes and on different axes. This concept is most eloquently explained in the field of aeronautics. If we take the three axes of conventional movement descriptions, we can think about moving both along and around those axes in order to take advantage of our true movement potential: 6-degrees of freedom:

- **Heaving:** Moving up and down the vertical axis
- **Surging:** Moving along the front-to-back axis
- **Swaying:** Moving along the side-to-side axis
- **Yawing:** Moving around the vertical axis
- **Rolling:** Moving around the front-to-back axis
- **Pitching:** Moving around the side-to-side axis

[To see the 6DoF in action, take a look at this description of how to use sandbag training to target each of the six degrees.](#) <- Click text to proceed to web page

The Evolution of Fitness

To understand how truly revolutionary this is for your training, you need a quick rundown of how “fitness” evolved.

What we think of as “strength training” today was pioneered by old time strongmen. They’re the guys who began to codify certain movements into “exercises,” and they were best known for rudimentary (in terms of movement sophistication) one-dimensional strength stunts. Things like lifting an enormous dumbbell overhead, or levering heavy sledgehammers.

Impressive feats, but not very sophisticated in terms of the range of movement the human body is capable of.

Next came powerlifting and Olympic lifting, characterized by short-range, high-tension, two-dimensional movements like the Clean and Jerk and the Snatch. If we were to classify them under the 6-Degree model, their training sessions consisted of Heaving and Pitching: movement in 2-Degrees of Freedom.

From there we moved into three-dimensional strength training.

This was the advent of bodybuilding. The problem with bodybuilding, from our model, is that it segments the body and trains it as a bag of spare parts rather than a total unit. It isn’t very efficient, and the strength developed isn’t integrated. You’re basically a very strong bag of spare parts.

Functional strength training came about as an answer to the isolationism of bodybuilding. The pioneers of functional strength training recognized that linear isolation exercises would not prepare them for real world activities like bending over to pick up a heavy package, or lifting an object overhead and across the body to reach a shelf. They added angular/diagonal

(tri-planar) movement to the mix, and they also began to train with “odd” objects like medicine balls and sandbags in addition to barbells (because barbells allow only linear, or at best semi-circular, movements). These additions allowed us to access 3-Degrees of Freedom in our strength training.

This was an obvious “great leap forward,” but there was one further evolution to come: the addition of rotary movement. Adding rotary movement to the existing 3-Degrees of functional movement doubled our potential and gave us 6-Degrees of Freedom. This was the contribution of the Circular Strength Training® system.

How does adding rotation double your potential? Simple. Take a look at this diagram. You can see that a Pitch is a rotation around the Swaying axis, a Yaw is a rotation around the Heaving axis, and a Roll is a rotation around the Surging axis.

The Superiority of Bodyweight Training

You can access all of these degrees of freedom quite readily through bodyweight training.

Weighted training is another matter. Barbells are incapable of being used through 6-Degrees of Freedom, and most other training tools are too dangerous to use in this way. You need a tool which can be safely swung around the body in complex patterns, and yet is heavy enough to cause an adaptation. That's why we at CST developed the Clubbell®, probably

the most practical portable gym you'll ever find. That's another story, and it's outside the scope of this one. If you want more information on Clubbell training in 6-Degrees of Freedom, pop over to Clubbell.TV.

“Training in 6-Degrees of Freedom will kick your butt faster than any other method.”

Let's get back on topic. We were discussing how bodyweight training with

this cutting-edge 6-Degrees of Freedom method will get you the rock hard body and optimal health that you crave.

Why should you care about training in 6-Degrees of Freedom?

Training in 6-Degrees of Freedom will kick your butt faster than any other method.

Why does that matter? It means you'll be finished training sooner. You can spend more of your time doing the important things in life— —playing with your kids, hanging with friends, pursuing your interests— —rather than burning away countless hours in a gym.

Training in 6-Degrees will also ensure that your body remains balanced. You won't waste time dealing with overuse injuries, or overcompensations created by doing the same repetitive movements in the same planes day after day. If you sit at a desk all day, for hours and hours, it becomes easier and easier to stay that way. Your body becomes chair-shaped. You've seen that, right? No, it isn't normal or inevitable. You're simply creating chains of tension and reinforcing those chains through habit. You have to release them in the opposite direction to restore balance and maintain good health. If you don't, aches and pains are just the beginning of your problems.

Suffice it to say that balancing your workout across all 6-Degrees of human movement will ensure that your training doesn't add further imbalances to your life. Instead, it'll promote health and will open entirely new realms of movement possibility. And if you follow the BER FUN-damentals Workout, it'll be easier than you think.

The BER FUN-damentals workout

The workout consists of 6 exercises, one movement for each of the 6 Degrees of Freedom. We've made the structure of the program as easy to follow as possible. You'll do each exercise for a total of 30 seconds before moving on to the next (without rest). That's one round. When you've completed a round of all 6 exercises, you'll have earned a break. Rest for one minute before starting the next round.

1 Round lasts 3 minutes and is made up of:

- **Heave** - 30 seconds
- **Surge** - 30 seconds
- **Sway** - 30 seconds
- **Pitch** - 30 seconds
- **Yaw** - 30 seconds
- **Roll** - 30 seconds

Rest 60 seconds and begin the next Round.

Simple as that! You'll find exercise descriptions for each level of all the movements at the end of this manual.

The 12-Minute Secret

When you're first starting out with the program, perform 3 Rounds of the circuit. This will give you a 12 minute workout.

Don't think 12 minutes is enough? It depends on what you do for those 12 minutes.

You've heard of the "runner's high," right? Of "second wind"? It happens when your body hits a point of Circulo-respiratory distress (CRD), a fancy name for that gasping, heartpounding, sweating, think-I'm-gonna-die point where most people quit. If you push through that barrier, you'll experience an "upshift" where your body kicks into next gear (there are more than just two) and everything is suddenly cruising.

That upshift has tremendous health benefits, including the stimulation of the immune system. Because the immune, endocrine and nervous systems are interrelated, an adaptation in one is reflected in the other two. Do this over time and your health and vitality will soar.

One of the coolest things about this program is how easily it allows you to tap into the NIE response. Runners have to run for increasingly long times to access it. Other activities, like cycling or high rep weight training, can access it too, but repetitive motions in limited ranges create other unwanted adaptations in the body—such as chains of tension linked to those movements and/or repetitive strain injuries.

Because the program in this ebook was designed to move your body through all Six Degrees of Freedom, repetitive stress is avoided. And it naturally compensates for any specific conditioning you've experienced throughout your day—including hunching over a desk or

a computer. You hit the NIE response in a healthy way and you hit it sooner than with other activities, because moving through all six degrees at that pace is **HARDCORE!**

So where does “12 minutes” come in? If you want to maximize your health and minimize your exercise time, you only need to punch through that membrane into “second gear.” For the average person on this program, that happens at around 12 minutes, depending on your level of deconditioning. Once you upshift, you’re done for the day!

Progression

If you’re following the program, your body will adapt and it will get easier. That’s great! It means you’re progressing. There are a couple things you can do at that point to increase the challenge in order to continue making gains from this program.

As the circuit becomes easier, you can increase the pace at which you perform: in other words, step on the gas and increase your speed while maintaining good form. You’ll eventually reach a point where it’s impossible to cram any more reps into each 30-second set. When this happens, cut back a bit on the number of repetitions (the volume) per exercise and add another round.

In this method, you’re manipulating the sets and reps to increase the challenge of the program and stimulate adaptation. Another option would be to manipulate the variable of exercise sophistication. This latter approach is unique to the Circular Strength Training® system.

Choosing Exercise Level - Increasing Sophistication Principle

Each exercise category in this program comes with three movement options. Each option represents an increase in the motor sophistication of that movement. Begin with the simplest form of the exercise, even if it seems too easy, and progress gradually through the subsequent levels.

Leave yourself at least two training sessions before increasing the movement sophistication of any particular exercise. Because each variation increases in complexity by building upon the version that came before, you shouldn't advance unless you feel you have a strong technical mastery of each variation. You can judge your mastery against the technical descriptions in this ebook.

“Leave yourself at least two training sessions before increasing the movement sophistication...”

There are two ways you can approach movement sophistication in this program. You can attempt to increase the movement sophistication of each exercise as you move through the program (see the chart below for an example of how to do this). Keep in mind that you may not be able to increase the level of sophistication in every exercise across the board. It's normal for some exercises to seem easy, while others will take you longer to master. Increase the sophistication of the movements that come more easily to you, and work diligently at the ones which are more challenging. You'll get there!

The other option for manipulating movement sophistication in this program would be to do a complete training cycle with each version of the movements. For example, do a one-month training cycle of this program where you do every exercise at the easiest level of sophistication. Increase your reps and sets as outlined in the section on Progression above. When you reach the end of that month, drop back and start the program again, but this time doing every exercise at the second level of sophistication. Do the same with the third level of sophistication. This will give you three progressive one-month training cycles: in other words, three months of programs.

As you can see, there are several ways that you can approach this one simple BER FUN-damentals Workout. Start with the basic 3 round program outlined at the beginning, and then progress using one of the three options we've provided:

1. manipulating sets/reps
2. increasing movement sophistication within a cycle
3. completing 3 cycles of the program, one for each level of movement sophistication

Workout Schedule

If the BER FUN-damentals Workout is your main exercise modality, we suggest doing 3 sessions per week. Those who are already used to a vigorous training routine can do the workout as often as every second day.

If the FUN-damentals workout is NOT your main exercise modality, you can also schedule the workout into your existing program. Here are some suggestions for doing so:

- Replace your conventional “cardio” session with the BER FUN-damentals Workout
- Use the BER FUN-damentals Workout as a convenient solution for training on business trips, vacations or hectic weeks when you can’t get to the gym
- Do 3-4 repetitions of each exercise, slowly and deeply, as a warm-up for your regular workout routine

Sample Progression for the BER FUN-damentals workout

| | Monday | Tuesday | Wednesday | Thursday | Friday | Saturday | Sunday |
|---------------|---|---------|---|----------|---|----------|--------|
| Week 1 | 3 Rounds at First Level of Sophistication | | 3 Rounds at First Level of Sophistication (increase repetitions per exercise) | | 3 Rounds at Second Level of Sophistication (reduce repetitions per exercise) | | |
| Week 2 | 3 Rounds at Second Level of Sophistication (increase repetitions per exercise) | | 3 Rounds at Second Level of Sophistication (increase repetitions per exercise) | | 3 Rounds at Second Level of Sophistication (increase repetitions per exercise) | | |
| Week 3 | 3 Rounds at Third Level of Sophistication (reduce repetitions per exercise) | | 3 Rounds at Third Level of Sophistication (increase repetitions per exercise) | | 3 Rounds at Third Level of Sophistication (increase repetitions per exercise) | | |
| Week 4 | 4 Rounds at Third Level of Sophistication (reduce repetitions per exercise) | | 4 Rounds at Third Level of Sophistication (increase repetitions per exercise) | | 4 Rounds at Third Level of Sophistication (increase repetitions per exercise) | | |

Start by standing tall, stretching the top of the head towards the sky. Find your mid-foot balance. Create a small arch in your low back by tilting your pelvis as if you were trying to roll your butt slightly towards the back of your head.

HEAVE

Drive your butt back and begin to lower yourself. Your balance may transfer slightly towards the heels. Reach your hands forward to counter balance. Maintain a long spine and a slight arch in the low back. Stop your descent when you begin to lose that arch.

Think of driving your hips forward and up by driving off heels to mid-foot. Keep your spine stretched long throughout the rising movement. Tightly clench your butt muscles as you reach the top of the movement. Finish with your entire body stalk straight like a soldier.

Begin with weight balanced over planted leg (foot can be turned out up to 15°). Stretch the spine long from the crown of the head to the coccyx. Find your balance on the area between the heel and mid foot of the planted leg. The free leg is cocked to the back.

HEAVE

Begin the movement by driving the hips towards the back wall, then reach back and down with the hips to lower your center of gravity. Reach forward with the hands to counter-balance this movement. Weight should remain between the heel and mid-foot. Keep the spine stretched long. Ensure that the knee tracks in a parallel line to the direction of the toes. The free leg shin stays parallel to the ground

Drive off the ground through the heel and project the hips up and forward, using an active contraction of the glutes. Exhale as you drive up. Finish “straight as a soldier” in the top position with the glutes clenched and the hips extended. Keep your free shin parallel to the floor at all times.

Note: Switch sides each Round. If doing an odd number of Rounds, start the next session on the other side.

Find balance on mid-foot and stretch the spine from the crown of the head to the coccyx, creating a slight arch in the low back. Begin by sending the hips slightly back then lowering down as far as you can go without losing your long spine and slightly arched back. Reach forward with your arms to counter balance the movement.

HEAVE

From your bottom position in the squat, forcefully exhale as you drive up from the ground with your legs, pushing through your heels first, and snap your hips up and forward. At the same time your hands will drive down and back. You should finish with your hips extended forward and your hands just behind your hips as you float at the apex of your jump.

As you begin to come down from the apex, start sending the hips back again and prepare to absorb your downward momentum with the legs, landing as softly as possible before repeating. Make as little noise as possible on landing.

Get yourself set with your arms extended and palms on the floor, just outside shoulder width. Stretch the spine long and slightly contract the glutes and abs in order to get a straight line from the top of the head all the way down to the knees. Pull your shoulders down away from your ears.

SURGE

Slowly lower your chest to about one inch shy of the ground. Elbows should point back at about 45° from the body. Keep the shoulders pulled down away from the ears throughout the movement. Draw your belly button slightly in towards your spine and keep the glutes contracted in order to keep your core tight, maintaining a straight line from head to knees.

Forcefully exhale and press through your hands to drive back to starting position. Maintain your body alignment and your shoulder pack throughout.

Get yourself set with your arms extended and palms on the floor, just outside shoulder width. Stretch the spine long and slightly contract the glutes and abs in order to get a straight line from the top of the head all the way down to the feet. Pull your shoulders down away from your ears.

SURGE

Slowly lower your chest to about one inch shy of the ground. Elbows should point back at about 45° from the body. Keep the shoulders pulled down away from the ears throughout the movement. Draw your belly button slightly in towards your spine and keep the glutes contracted in order to keep your core tight, maintaining a straight line from head to feet.

Forcefully exhale and press through your hands to drive back to starting position. Maintain your body alignment and your shoulder pack throughout.

SURGE

Begin in a kneeling position and bring your butt as close to your heels as possible. Your knees should be slightly splayed out (at about 45°). Stretch the spine long from crown to coccyx.

Lower your forehead to the floor by bending the arms. Keep the elbows splayed at about 45° towards the back and your shoulders pulled down away from your ears. Then press back up to the original position - butt to heels and arms extended.

Keeping the arms extended, press off the ball of foot to move the butt up towards the sky until your back is parallel with the ground. Lower the butt back down to heels and start over. This resembles a see-saw as you move back and forth from lowering the forehead to raising the butt.

Begin in a kneeling position and bring your butt as close to your heels as possible. Keeping your butt there, lean forward until your back is parallel to the floor with your hands on the ground. Your knees and elbows should be slightly splayed out (at about 45°). Stretch the spine long from crown to coccyx.

SURGE

Press equally with all four limbs in order to drive away from the floor. Ensure that your spine stays long and that your back remains parallel to the floor.

Return to the start position. Ensure that you bring your butt back to heels and your nose stays aligned with your hands. Keep your back parallel to the floor and your spine stretched long.

Begin in an upright position. Pull the crown of the head towards the sky to stretch the spine long. Draw the belly button in slightly to stabilize the trunk.

SWAY

Take a wide step out to the side. Keep both heels on the ground. Sink down on the leg that steps out until your thigh is as close to parallel with the floor as your comfort level allows. Exhale as you absorb the force of the step-off. Keep the spine as vertical as possible and stretched long.

Press forcefully off mid-foot of your step-off leg as you squeeze your glutes (butt muscles) to drive yourself back up to standing. Exhale during the effort of the push-off. Switch sides with each repetition

SWAY

Begin in an upright position. Pull the crown of the head towards the sky to stretch the spine long as you inhale. Draw the belly button in slightly to stabilize the trunk.

Take a wide step out to the side. Keep both heels on the ground. Sink down on the leg that steps out until your thigh is as close to parallel with the floor as your comfort level allows. Keep the spine as vertical as possible and stretched long. Exhale as you absorb the ground.

Stay crouched low and slide your center of mass towards your other leg (the one that stayed in place during the step-off).

Once your weight is transferred sufficiently to the new leg, finish up by drawing your step-off leg back in underneath you. Then press off mid foot and squeeze your glutes (butt muscles) to come back to the starting position. Switch sides with each repetition.

Take a wide step out to the side. Keep both heels on the ground. Sink down on the leg that steps out until your thigh is as close to parallel with the floor as your comfort level allows. Keep the spine as vertical as possible and stretched long.

SWAY

Without letting the butt rise up further from the ground, slide your weight towards your opposite leg.

Finish in a low side-lunge position on the new leg, thigh parallel with the ground and both heels on the ground. Exhale in the as you move towards the end point of each slide.

Start in a classic “Push-up” position. Shoot for a straight line from head to heels. Stretch the spine long. Pull the shoulders down away from the ears.

PITCH

Exhale and press from the hands and feet in order to fold the body in two and press the butt towards the sky. You should finish with a straight line from butt to hands - ears between biceps - and a straight line from butt to heels. Heels can leave the ground in order to maintain straight legs. Inhale as you lower back to starting position.

PITCH

Start in a classic “Push-up” position. Shoot for a straight line from head to heels. Stretch the spine long. Pull the shoulders down away from the ears.

Keeping your shoulders pulled down and back, and your arms locked straight, allow your hips to drop towards the ground. Squeeze the butt muscles slightly to protect the low back.

Forcefully snap the hips towards the sky in one powerful movement in order to bring the feet back in underneath you. Exhale on this powerful effort.

You should finish in a low Ball-of-Foot Squat, hands still in contact with the ground. Hop the feet back out to the original starting position.

PITCH

Start from a low Ball-of-Foot Squat, hands on the ground.

Splay the feet out towards the back and side as you drop your chest towards the ground. Turn your face to the side. Ensure your shoulders stay pulled away from your ears and that your elbows are oriented at about 45° to the back. The butt should be sticking up slightly.

Press through your palm heels to raise your shoulders up towards the sky. Bring your arms to a fully locked and straight position while keeping your shoulders pulled down and back. Slightly contract your butt muscles to protect the low back.

Forcefully snap the hips towards the sky in one powerful movement in order to bring the feet back in underneath you. Exhale on this powerful effort.

FUN-damentals

Level 1 - Lower Body Russian Twist (knees bent)

Lie on your back with knees bent, and shins parallel to the floor. Arms are held out to the sides palms down, pressing into the floor for stability. Chin is tucked and crown raised to ensure good spinal alignment.

YAW

Moving to the right, rotate from the waist to bring the knees to the floor on your right side. The legs should remain in the same bent alignment throughout. Both shoulder blades press into the floor to prevent compensating with the upper body.

With a hard exhale, rotate from the waist to bring the legs all the way to the left side. Again, the legs maintain their alignment, and shoulder blades are pressed into the floor to keep the back down. All movement is generated at the waist.

Try this variation if the bent knee version is too easy. Lie on your back with legs extended straight up, knees locked and toes pulled back. Arms are held out to the sides palms down, pressing into the floor for stability. Chin is tucked and crown raised to ensure good spinal alignment.

YAW

Moving to the right, rotate from the waist to bring the legs to the floor on your right side. The legs should remain in the same straight alignment throughout. Both shoulder blades press into the floor to prevent compensating with the upper body.

With a hard exhale, rotate from the waist to bring the legs all the way to the left side. Again, the legs maintain their alignment, and shoulder blades are pressed into the floor to keep the back down. All movement is generated at the waist.

YAW

Begin in a flat foot squat, feet about shoulder width apart, chin tucked and crown towards the ceiling to ensure good spinal alignment. Arms are held straight out in front.

Shifting your weight to the right, reach back with the right arm into the spot where you would fall off balance without a support. Point fingers away from you, forming a “tripod” structure with your two feet and right hand. Your weight is roughly 70% on the right arm and foot, and 30% on the left foot.

Shift fully back, placing the left hand into the same empty space on the left side, so that your weight is equally balanced between all four limbs. Fingers should be pointing away from you.

Shift your weight to the left, passing through the “tripod” position of two feet and left hand, and push off with the left hand to drive yourself back forward into the flat foot squat position. Remember to do repetitions in both directions, or do one circuit to the right followed by one circuit to the left.

YAW

Beginning in a flat foot squat, shift your weight to the right and reach back with the right arm into the spot where you would fall off balance without a support. Place the right arm down into that space, fingers pointing away from you, forming a “tripod” structure with your two feet and right hand. Your weight is roughly 70% on the right arm and foot, and 30% on the left foot.

As your body floats upward, rotate from the waist to turn towards the left while moving the extended left arm in an arc towards your left, following it with your eyes.

Your legs and arms should feel buoyant in this position, like a coiled spring ready to explode off the floor. Bounce up and down slightly—this is the elasticity which will propel your movement. When you’re ready, drive upwards off the coiled right arm, while at the same time driving with the legs and glutes to snap the hips straight up at the ceiling.

Continue rotating from the waist to your left, catching yourself in the “tripod” structure on your left side. The left arm should bend like a spring to absorb the landing, and the knees should turn slightly to that side to aid in this absorption.

Support your weight on the forearm of your bottom arm. Make sure you keep the shoulder packed down. Contract the glutes and the core to bring your hips off the ground and form a straight line from head to heels (or knees).

ROLL

Your lower support can either be from the feet or the knees. From the feet, stack the top foot over the bottom foot and maintain straight and slightly stiffened legs. From the knees, bend the lower leg back at 90° and stack the top knee over the bottom in the same manner.

Point your free hand to the sky to ensure proper alignment of the trunk. Concentrate on short exhales to aid in core contraction.

Note: Switch sides each Round. If doing an odd number of Rounds, start the next session on the other side.

The second level of sophistication has you balanced on your bottom hand rather than your forearm. Again, ensure that your shoulder stays packed down away from the ear.

ROLL

All the points from the previous page apply to the more advanced levels of sophistication.

The most advanced level involves raising the top leg. Make sure you do not alter the position of the hips when you raise the leg. You'll also stretch the free arm up over the head.

Note: Switch sides each Round. If doing an odd number of Rounds, start the next session on the other side.

***The Definitive Guide To
CST Bodyweight
Exercise For Any Goal***

So there you have it—the BER FUN-damentals workout.

We hope you've enjoyed this introduction to CST Bodyweight Exercise as much as we've enjoyed putting it together, and we hope you'll give it a try—because until you do, it's just words on paper. It's just the internet advice of two guys you've never met before, who claim to have produced incredible results with a pile of strange circus-freak methods. We've all been burned by promises that were too good to be true, and you're right to be skeptical. We've put together this free 40+ page ebook in order to earn your trust. We hope you'll meet us halfway.

The only results that matter are your results. You can read all the scientific studies in the world, but only your own personal success will motivate you to continue. The good news is that completing just one successful training cycle will create that momentum within you. And we want that for you.

We're passionate about bodyweight exercise because it's accessible to everyone. There are no extortionate gym memberships to pay. No machines to shackle yourself to. No schedules imposed by someone else. You can do it anywhere you please, at any time, even on the spur of the moment, because you carry the knowledge within you. We've chosen to make these products downloadable ebooks rather than DVD's and printed books to keep the cost low enough so that anyone can try it, right now, today. Like our Coach Scott Sonnon, we believe that optimal health, pain-free movement, and vitality are not "gifts"—they're your birthright as a human being. We feel an obligation to share these methods with you, to "pay it forward" for all those teachers and coaches who offered us a helping hand in our own journeys.

So try the program and let us know what you think. We're available to answer your questions on bodyweightcoach.com. You'll also find a support group of others who are taking the challenge along with you. Drop them a note of encouragement from time to time, and you're sure to make a friend who will support you in return.

If you enjoyed this program, you'll find even more to get excited about in our [Bodyweight Exercise Revolution ebook](#). In it we've compiled a series of five bodyweight-only programs

designed to meet a handful of the most popular health and fitness goals: fat loss, muscle gain, athleticism, strength, and longevity. Each program is designed like this one—with three levels of movement sophistication—so the program grows with you.

But the BER ebook also contains one bit of CST magic you won't find in BER FUN-damentals: the key to the 4x7 Wave periodization method. This unique means of waving the intensity levels of your training through repeated 4-day macrocycles ensures steady progress, high energy levels throughout the cycle, and a peak at the end of those 28-days the like of which you've never experienced before. We truly believe that once you try this method of training, you'll never go back to anything else.

Finally, we've got one last thing to tell you about in the world of BER. We listened carefully to all the feedback we received on the first edition of the ebook: the incredible success stories, the touching thank you emails, the questions, and the demands. We've followed your training blogs on the RMAX Forum and we've looked at your goals. It's clear to us that fat loss is a major concern to our readers. It's the bane of our sedentary lifestyle and, for many of us, our greatest training foe.

You've expressed a need, and as your coaches we feel compelled to deliver. We're hard at work on an adjunct to BER: a three-month dedicated CST Bodyweight Exercise for Fat Loss program. Three consecutive months made up of three progressive 28-day fat loss cycles which apply the 4x7 Wave method of periodization, and the best protocols and movements our collective decades of experience have to offer. We're really excited about this one, because we believe in the transformative potential that lies locked within each one of you. This new 3-Month Fat Loss program is designed to release it. Stay tuned.

Thank you for hearing us out, for supporting our work, and for trying the BER FUN-damentals program. We're honoured that you've chosen us as your coaches, and we're grateful to be a part of your journey.

Wishing you all the best of success and health,

Ryan and Adam.

CST Faculty Head Coach Ryan Murdock

Ryan Murdock

Ryan Murdock is an RMAX Faculty Coach and Senior Editor of RMAX Magazine, the internet's largest fitness and martial arts publication. He is the creator and star of the three-volume RMAX Powered Bujinkan DVD Series and author of the RMAX Training Group Manual. He has been involved in martial arts for the past 20 years, and strength training for the past 25 years.

He holds black belt rankings in Bujinkan Budo Taijutsu and is one of four Head Coaches of the RMAX FlowFighting™ system. In 2006 he was inducted into the International Martial Arts Hall of Fame as Master Instructor of the Year. As one of four Faculty Coaches handpicked by RMAX founder Scott Sonnon for his elite Coaching Staff, Murdock has taken a leading role in the research and development of Circular Strength Training® (CST) and RMAX FlowFighting®. He certifies CST Instructors and Coaches, conducts seminars worldwide, and works with a wide range of private clients including athletes, fighters, and international rock stars like Jim Gillette of Nitro, guitar diva Lita Ford, and Steve Kilbey of The Church.

In addition to his work with RMAX, Coach Murdock regularly puts his training to the test in some of the world's most unforgiving places as a widely published travel writer / explorer. This pursuit has taken him to 42 countries to date, including Mongolia, Nicaragua, and North Korea, by Russian jeep, motorcycle, dugout canoe, horse and camel. An Associate Editor of Outpost Magazine, his article "Taklamakan: The Worst Desert in the World" was nominated for a Canadian National Magazine Award in 2006. Ryan Murdock, RMAX Faculty Coach • Senior Editor, RMAX Magazine

CST Staff Head Coach Adam Steer

Coach Adam Steer

My grandfather sparked my lifelong fascination with health and fitness. He simply wanted to “keep me out of trouble” – instead he shaped the person and the coach that I am today. Sport became the lodestone of my life. I went on to compete in Laser Class sailing at an international level, and to compete in skiing, football and hockey, among a myriad of other sports and recreational activities. Coaching is a natural outgrowth of athletics, and I discovered that I had a talent for it.

My first coaching passion, alpine skiing, granted me the privilege of working with young elite athletes like current Canadian Alpine Ski Team member Frank Bourque, and now allows me to form the minds of other coaches across Canada as a Level 4 Course Conductor for the Canadian Ski Instructors Alliance. With a background in hockey and skiing, I soon rose from an entry-level instructor of inline skating to become the top Examiner in the International Inline Skating Association. I’ve traveled the world in that role, “coaching the coaches” in Canada, the United States, Germany, Holland, Slovenia and Singapore.

Throughout my journey, I’ve always sought out the best mentors and resources. This is what led me to Coach Sonnon and his Circular Strength Training® (CST) system, where devoted study and intense personal practice culminated in my successful completion of the rigorous CST Head Coach examination process. Now, I serve others in search of excellence. I know the path well, because I constantly test the limits of my own performance.
